EDUCATION

The University of Texas at El Paso, El Paso Tx

Expected Graduation: December 2026

- Degree: Bachelors of Science in Computer Science
- GPA: 3.9/4.0

El Paso Community College, El Paso TX

Graduated: December 2023

- Associate of Art in Multidisciplinary Studies

SKILLS: Python, Java, C#, Unity, SQL, Git, Firebase, JavaScript, Agile, OOP, Rust, Docker, Vue, Playwright, Cesium

EXPERIENCE

SAIC – SW Engineer Intern

June 1st 2026-August 14th 2026

- Contributed to the development of a network data capture and analysis tool using Agile development methodologies.
- Implemented a tactical viewer using CesiumJS to read, process, and render air picture messages for visualization and analysis.
- Developed network message dissectors in Rust to parse and analyze captured data.
- Contributed to database architecture refactoring to improve user connection security and prevent unauthorized data exposure.
- Implemented a frontend external window feature for project streams, allowing users to continue observing streams without remaining on the stream page and view them across different monitors.

Bandit Game Studio- Technical Team member

January 2025-Current

- Develop Unity-based technical demos to prototype core gameplay systems and evaluate new mechanics for upcoming studio projects.
- Build and maintain foundational game systems, tools, and pipelines to support future full-game production.
- Collaborate closely with artists, designers, and production leads to ensure technical feasibility and smooth feature integration.
- Assist in debugging, performance optimization, and testing across early-stage prototypes.

PROJECTS

Miner Airlines-Agile Development Project | JavaScript, Firebase

- Collaborated in a team of 6 practicing agile software development philosophies to develop a airline website where customers can search, book and check in for flights
- Implemented a rebooking feature that automatically looks for similar flights and inputs the user flight details such as number of seats and amenities
- Designed a “My Bookings” page where customers bookings, both current and past flights, appear with their flight details along side the ability to cancel or reschedule said booking

Knight Demo- Bandit Tech Demo | Unity, C#

- Created a tech demo for a playable character for an upcoming Bandit Game Studio project based on ideas given by the level design team
- Implemented a combat system based on close melee combat, with a light and heavy attack with different timings, and a spin attack that is activated when three heavy attacks are chained and timed correctly.
- Created a shield mode, where the player equips a shield that blocks off attacks and allows the player to do a short dash that pushes enemies away but slows down player movement speed
- Implemented both normal 3D controls and tank controls to show the differences of each control scheme

The Odyssey- Game Jam Project | Unity, C#

- Collaborated with a team of three programmers and one artist to create a playable game within a 48 hour time limit
- Implemented core gameplay features in Unity using C# such as player movement, enemy pathfinding, player and enemy combat and rigging sprites into the correct animations.
- Managed the team to work on different aspects of the game to complete it under the 48 hour deadline
